    FOREIGN KEY (adopter_id) REFERENCES Adopters(adopter_id),
```

FOREIGN KEY (staff_id) REFERENCES Staff(staff_id),

CHECK (adoption_fee >= 0)

);

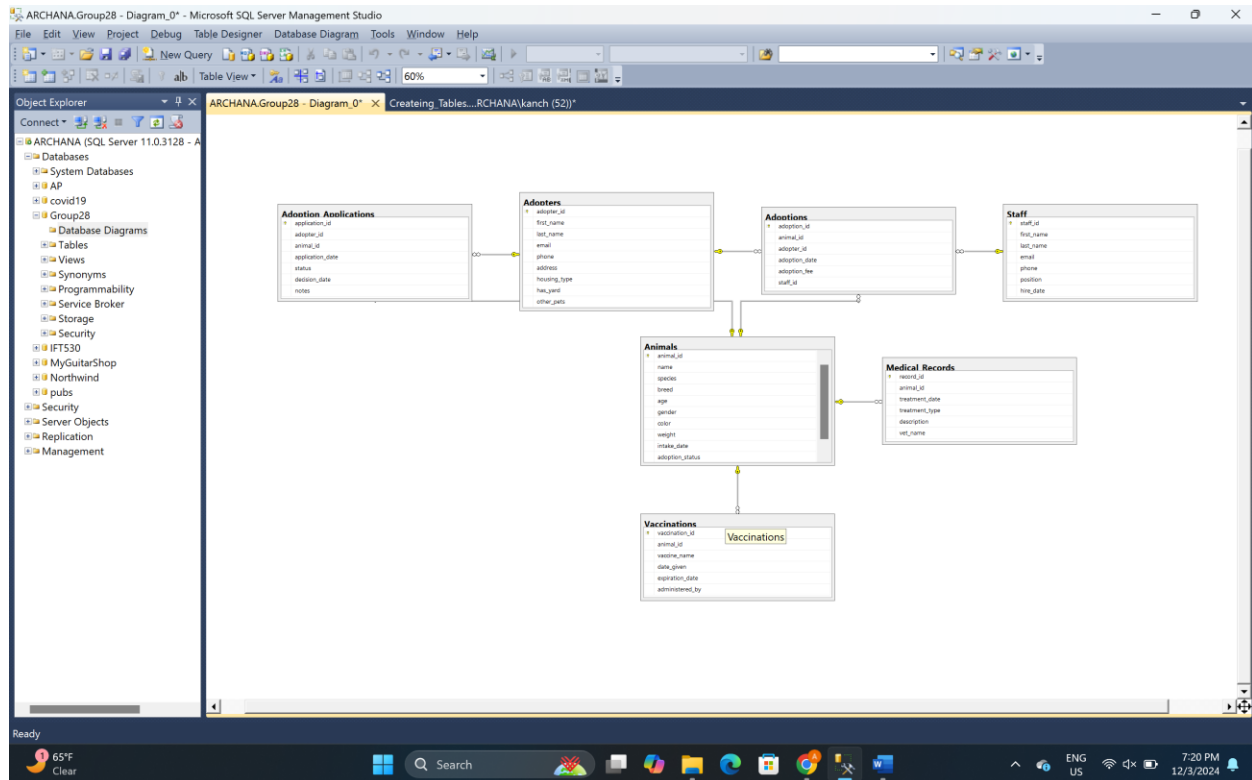

The screenshot displays the Microsoft SQL Server Management Studio (SSMS) interface. The main window shows a SQL query script for a database named 'ARCHANA'. The script includes comments about the group number (28), team members (Archana Kanchimireddy and Raghu Menni Lokanadhanaidu), course (IFT/530), and a history entry dated 12/06/2023 for a 'Final Project'. The query itself consists of two main parts: a 'Check and drop existing tables' section and a 'Create Animals Table' section. The 'Check and drop' section uses IF statements to drop tables 'dbo.Adoptions', 'dbo.Adoption_Applications', 'dbo.Vaccinations', 'dbo.Medical_Records', 'dbo.Adopters', 'dbo.Staff', and 'dbo.Animals' if they exist. The 'Create Animals Table' section creates a table with columns: animal_id (INT, NOT NULL, IDENTITY(1,1)), name (VARCHAR(50), NOT NULL), species (VARCHAR(50), NOT NULL), breed (VARCHAR(50)), age (INT), gender (VARCHAR(10), NOT NULL, CHECK (gender IN ('Male', 'Female', 'Unknown'))), color (VARCHAR(50)), weight (DECIMAL(5,2)), intake_date (DATE, NOT NULL), and adoption_status (VARCHAR(10), NOT NULL, CHECK (adoption_status IN ('Available', 'Pending', 'Adopted'))). A status bar at the bottom indicates 'Query executed successfully.' and '0 rows'.

-- View Animals table

SELECT * FROM Animals;

The screenshot shows the Microsoft SQL Server Management Studio interface. The main window displays a SQL query with comments for viewing various tables. The query is as follows:

```
139 -- View Animals table
140 SELECT * FROM Animals;
141
142 -- View Medical_Records table
143 SELECT * FROM Medical_Records;
144
145 -- View Adopters table
146 SELECT * FROM Adopters;
147
148 -- View Vaccinations table
149 SELECT * FROM Vaccinations;
150
151 -- View Adoption_Applications table
152 SELECT * FROM Adoption_Applications;
153
154 -- View Adoptions table
155 SELECT * FROM Adoptions;
156
157 -- View Staff table
158 SELECT * FROM Staff;
159
```

The Results pane shows the output of the first query, displaying 10 rows of animal data:

	animal_id	name	species	breed	age	gender	color	weight	intake_date	adoption_status
1	1	Max	Dog	Labrador	3	Male	Yellow	65.50	2023-01-15	Available
2	2	Luna	Cat	Siamese	2	Female	Cream	8.20	2023-02-20	Adopted
3	3	Rocky	Dog	German Shepherd	5	Male	Black and Tan	75.00	2023-03-10	Available
4	4	Bella	Cat	Persian	4	Female	White	9.50	2023-04-05	Pending
5	5	Charlie	Dog	Beagle	2	Male	Tricolor	22.50	2023-05-12	Available
6	6	Lucy	Cat	Maine Coon	3	Female	Tabby	12.00	2023-06-18	Available
7	7	Cooper	Dog	Golden Retriever	1	Male	Golden	45.00	2023-07-22	Adopted
8	8	Milo	Cat	Sphinx	2	Male	Hairless	7.50	2023-08-30	Available
9	9	Daisy	Dog	Poodle	6	Female	White	15.50	2023-09-14	Available
10	10	Oliver	Cat	British Shorthair	4	Male	Gray	11.00	2023-10-25	Pending

The status bar at the bottom indicates "Query executed successfully." and "ARCHANA (11.0 SP1) ARCHANA\kanch (53) Group28 00:00:00 10 rows".

-- View Staff table

SELECT * FROM Staff;

4. Create three queries and convert them into views. Explain why you think would be useful to the user. All queries must be joined to one or more tables. Make sure you restrict the data by using a where clause for each of the queries. – (30 marks)

1.Available Animals View:

/*

** Group number:28

**Team member 1:Archana Kanchimireddy

**Team member2:Raghu Menni Lokanadhanaidu

** Course: IFT/530

** SQL Server Version: Microsoft SQL Server 2012 (SP1)

** History

** Date Created Comments

** 12/06/2023 Final Project

*/

CREATE VIEW AvailableAnimals AS

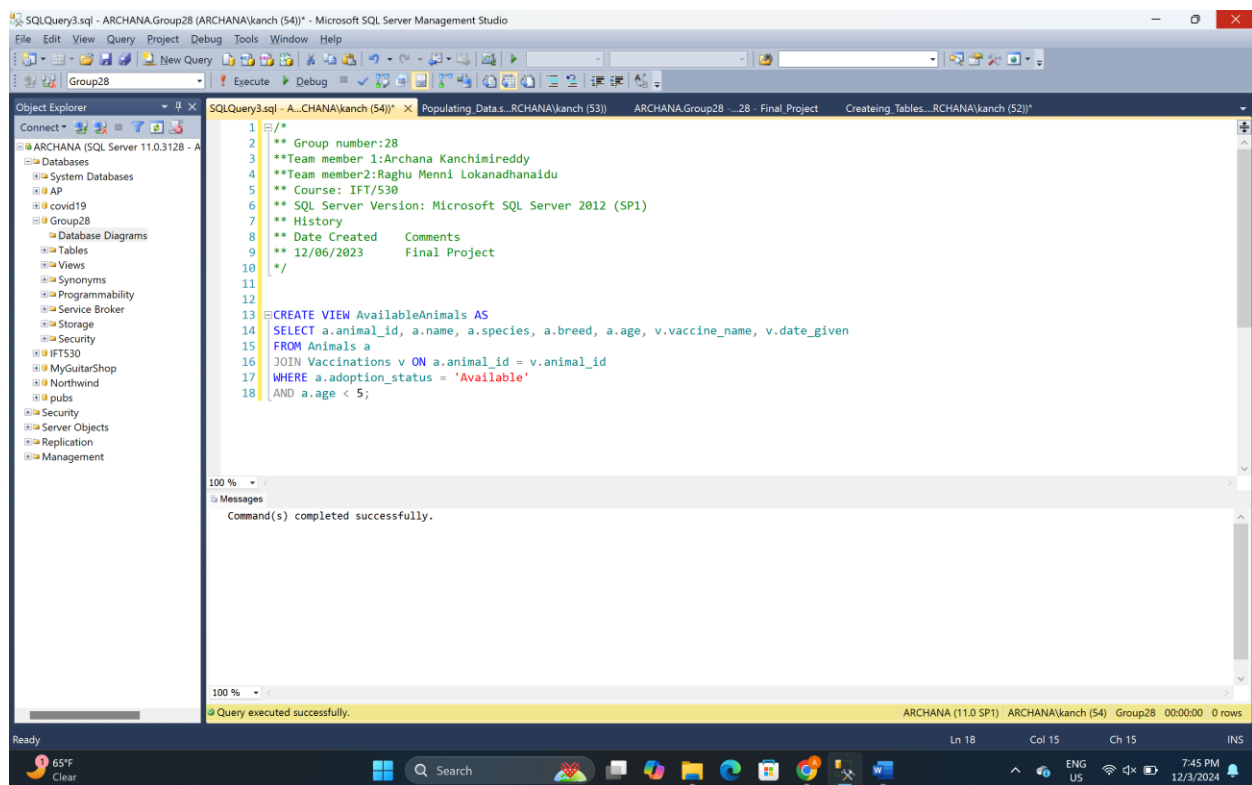

SELECT a.animal_id, a.name, a.species, a.breed, a.age, v.vaccine_name,
v.date_given

FROM Animals a

JOIN Vaccinations v ON a.animal_id = v.animal_id

WHERE a.adoption_status = 'Available'

AND a.age < 5;

Explanation: This view provides a list of available young animals (under 5 years old) with their vaccination information. It's useful for potential adopters to quickly see healthy, vaccinated animals that are ready for adoption, focusing on younger pets which are often in higher demand.

2.Pending Adoption Applications View:

/*

** Group number:28

**Team member 1:Archana Kanchimireddy

**Team member2:Raghu Menni Lokanadhanaidu

** Course: IFT/530

** SQL Server Version: Microsoft SQL Server 2012 (SP1)

** History

** Date Created Comments

** 12/06/2023 Final Project

*/

CREATE VIEW PendingApplications AS

SELECT ap.application_id, a.name AS animal_name, ad.first_name, ad.last_name,
ap.application_date

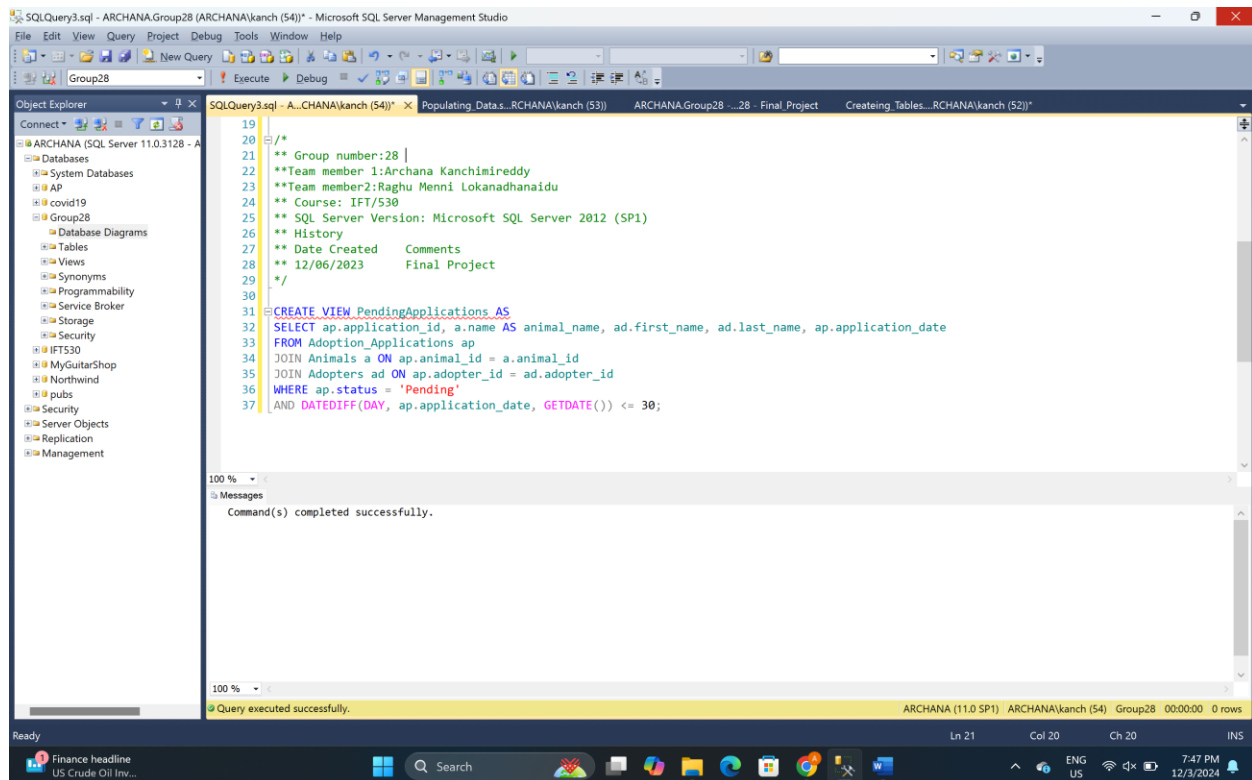

FROM Adoption_Applications ap

JOIN Animals a ON ap.animal_id = a.animal_id

JOIN Adopters ad ON ap.adopter_id = ad.adopter_id

WHERE ap.status = 'Pending'

AND DATEDIFF(DAY, ap.application_date, GETDATE()) <= 30;

Explanation: This view shows pending adoption applications submitted within the last 30 days. It's valuable for shelter staff to track recent applications that need review, helping them prioritize and process applications efficiently.

3.Recent Adoptions by Staff Member View:

/*

** Group number:28

**Team member 1:Archana Kanchimireddy

**Team member2:Raghu Menni Lokanadhanaidu

** Course: IFT/530

** SQL Server Version: Microsoft SQL Server 2012 (SP1)

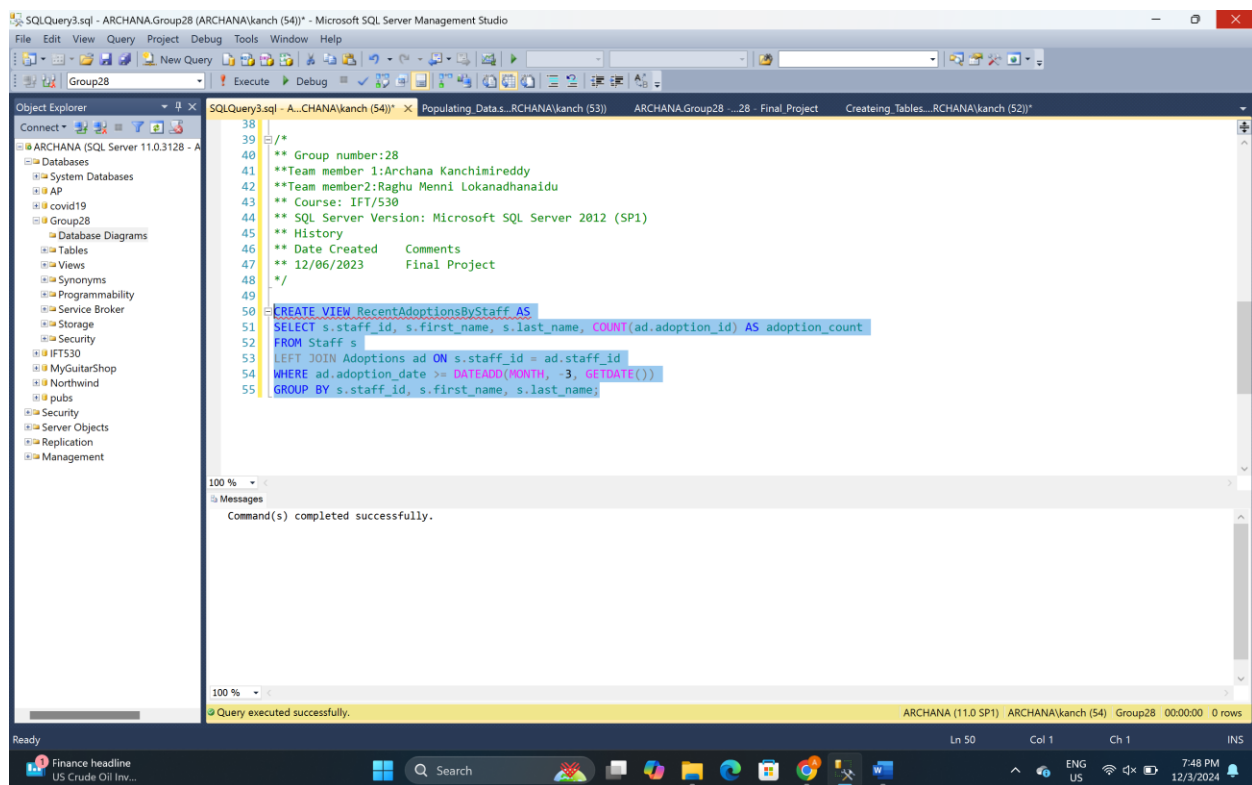

** History

** Date Created Comments

** 12/06/2023 Final Project

*/

```
CREATE VIEW RecentAdoptionsByStaff AS  
  
SELECT s.staff_id, s.first_name, s.last_name, COUNT(ad.adoption_id) AS  
adoption_count  
  
FROM Staff s  
  
LEFT JOIN Adoptions ad ON s.staff_id = ad.staff_id  
  
WHERE ad.adoption_date >= DATEADD(MONTH, -3, GETDATE())  
  
GROUP BY s.staff_id, s.first_name, s.last_name;
```

Explanation: This view displays the number of adoptions processed by each staff member in the last three months. It's useful for management to assess staff performance in facilitating adoptions and identify top performers or those who might need additional support.

5. Create an audit table for one of the lookup tables and demonstrate data saved to that audit table when data in the original table is inserted, modified, or deleted. Include an additional column in the audit table that will have a datetime field when the data was changed in the original table. Include the script to test all the operations - (20 marks)

```
SELECT i.animal_id, 'UPDATE', i.name, i.species, i.breed, i.age, i.gender,  
i.color, i.weight, i.intake_date, i.adoption_status, SUSER_SNAME(), GETDATE()  
FROM inserted i;  
END;  
GO
```

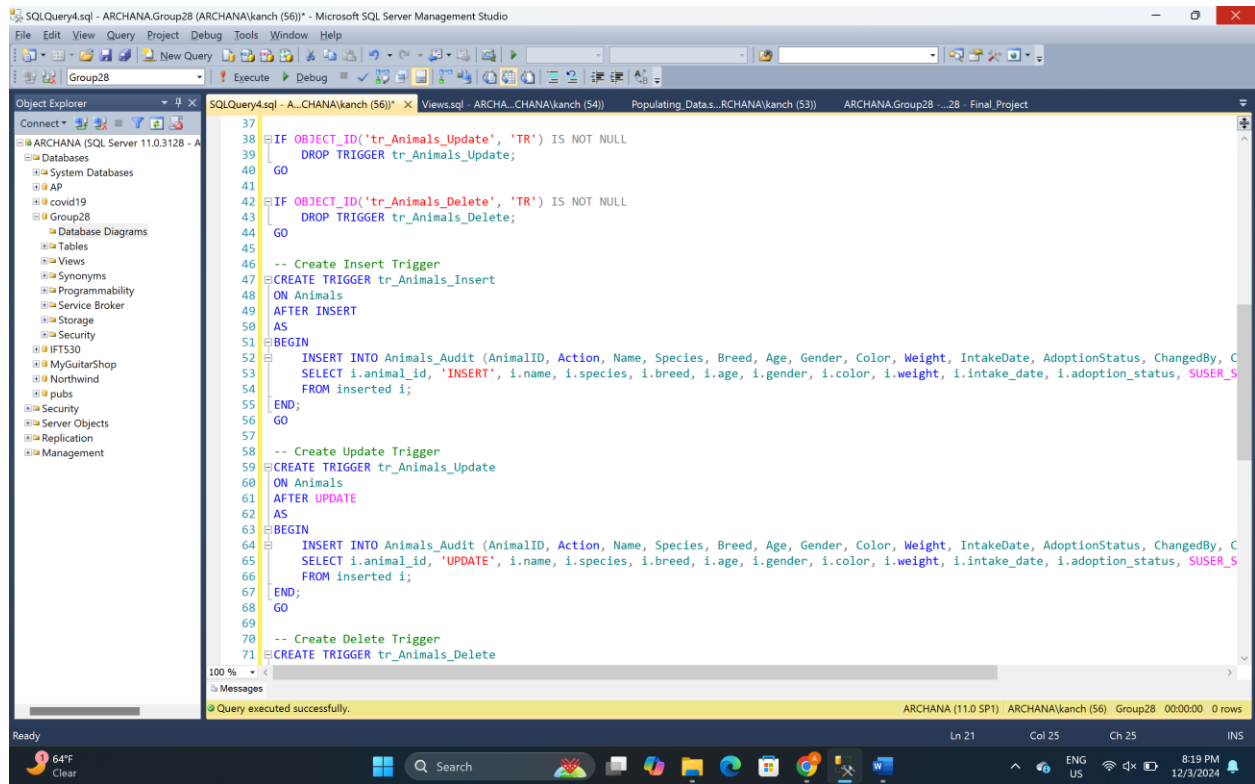

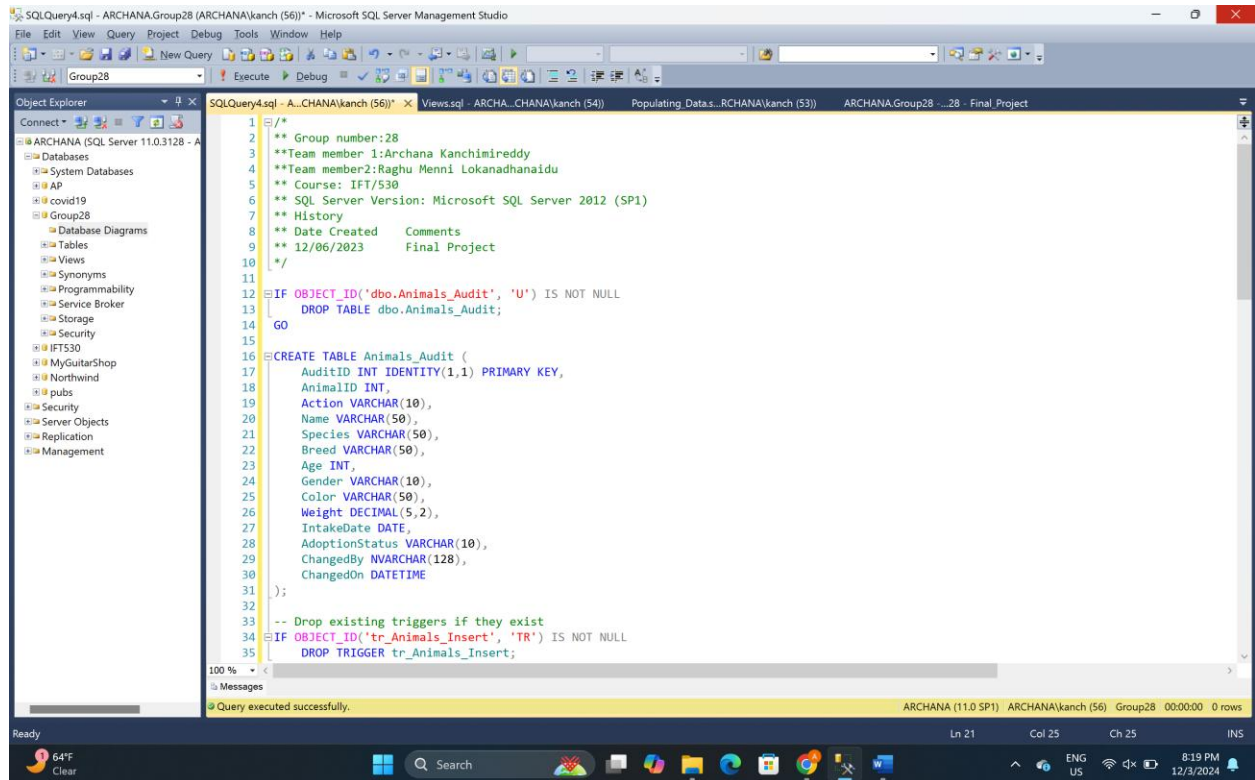

-- Create Delete Trigger

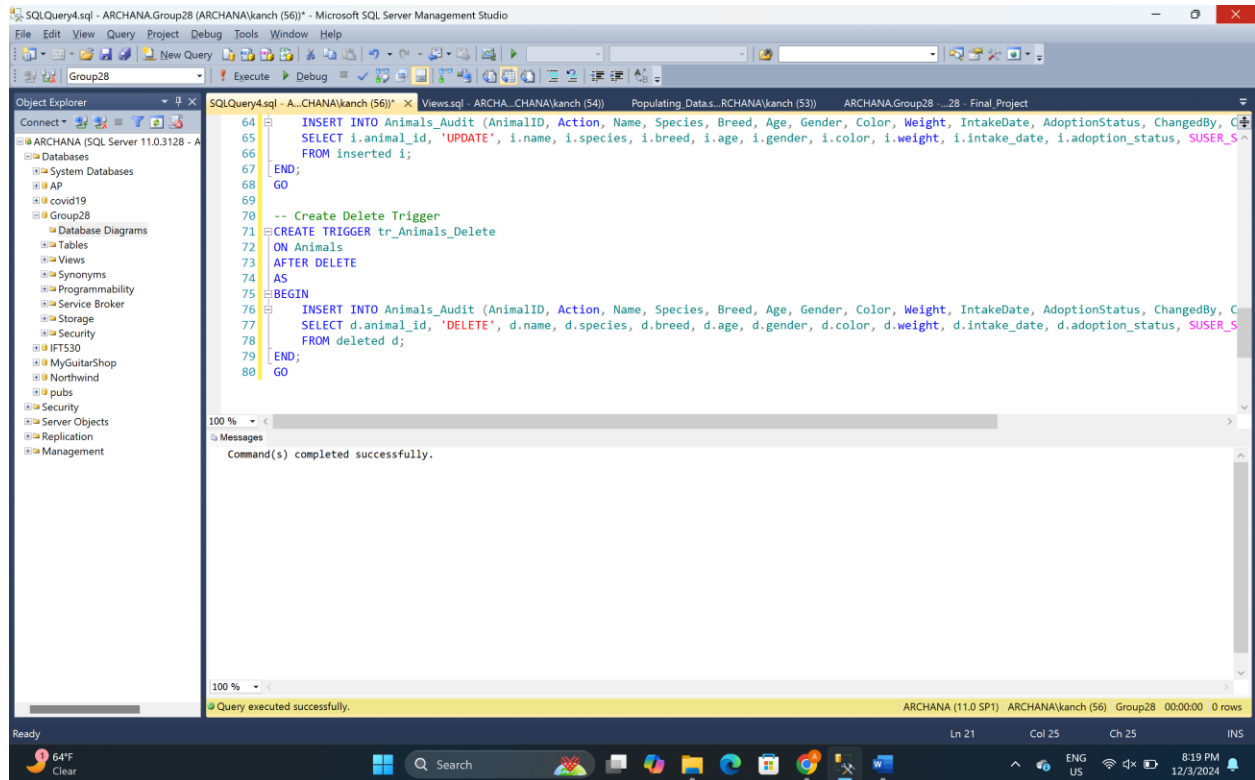

```
CREATE TRIGGER tr_Animals_Delete  
ON Animals  
AFTER DELETE  
AS  
BEGIN
```

```
INSERT INTO Animals_Audit (AnimalID, Action, Name, Species, Breed, Age,  
Gender, Color, Weight, IntakeDate, AdoptionStatus, ChangedBy, ChangedOn)
```

```
SELECT d.animal_id, 'DELETE', d.name, d.species, d.breed, d.age, d.gender,  
d.color, d.weight, d.intake_date, d.adoption_status, SUSER_SNAME(),  
GETDATE()
```

```
FROM deleted d;  
END;  
GO
```

-- Display the original Animals table

```
SELECT * FROM Animals;
```

-- Display the Animals_Audit table after insert

```
INSERT INTO Animals (name, species, breed, age, gender, color, weight,
intake_date, adoption_status)
```

```
VALUES ('Buddy', 'Dog', 'Golden Retriever', 2, 'Male', 'Golden', 65.5, '2023-12-
01', 'Available');
```

```
SELECT * FROM Animals_Audit;
```

-- Display the Animals_Audit table after update

```
UPDATE Animals
```

SET age = 3, weight = 70.2

WHERE name = 'Buddy';

SELECT * FROM Animals_Audit;

-- Display the Animals_Audit table after delete

DELETE FROM Animals

WHERE name = 'Buddy';

SELECT * FROM Animals_Audit;

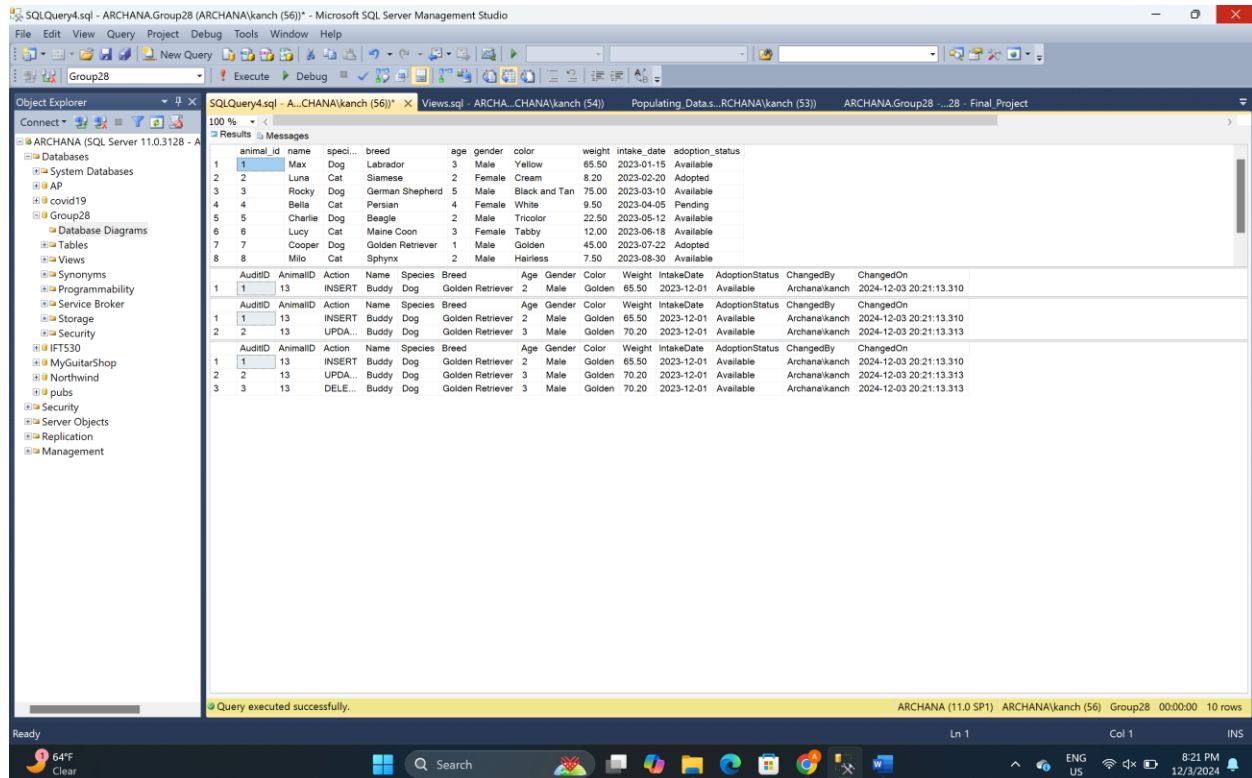

The screenshot shows the Microsoft SQL Server Management Studio interface. The main window displays a SQL query script with the following content:

```
80 GO
81
82 -- Display the original Animals table
83 SELECT * FROM Animals;
84
85 -- Display the Animals_Audit table after insert
86 INSERT INTO Animals (name, species, breed, age, gender, color, weight, intake_date, adoption_status)
87 VALUES ('Buddy', 'Dog', 'Golden Retriever', 2, 'Male', 'Golden', 65.5, '2023-12-01', 'Available');
88
89 SELECT * FROM Animals_Audit;
90
91 -- Display the Animals_Audit table after update
92 UPDATE Animals
93 SET age = 3, weight = 70.2
94 WHERE name = 'Buddy';
95
96 SELECT * FROM Animals_Audit;
97
98 -- Display the Animals_Audit table after delete
99 DELETE FROM Animals
100 WHERE name = 'Buddy';
101
102 SELECT * FROM Animals_Audit;
```

The Results pane at the bottom shows the output of the first query, displaying a table with 10 rows and 10 columns: animal_id, name, species, breed, age, gender, color, weight, intake_date, and adoption_status. The data is as follows:

animal_id	name	species	breed	age	gender	color	weight	intake_date	adoption_status
1	Max	Dog	Labrador	3	Male	Yellow	65.50	2023-01-15	Available
2	Luna	Cat	Siamese	2	Female	Cream	8.20	2023-02-20	Adopted
3	Rocky	Dog	German Shepherd	5	Male	Black and Tan	75.00	2023-03-10	Available
4	Bella	Cat	Persian	4	Female	White	9.50	2023-04-05	Pending
5	Charlie	Dog	Beagle	2	Male	Tricolor	22.50	2023-05-12	Available
6	Ivy	Cat	Maine Coon	1	Female	Tabby	12.00	2023-06-18	Available

The status bar at the bottom indicates that the query was executed successfully and shows the server name, database, and other details.

6.Demonstrate the use of the one stored procedures and User Defined Function (UDF) for your database. Include create and drop scripts. – (20 marks)

        END  
    END  
  
    ELSE  
    BEGIN
```

SET @Fee = 50.00 -- Default fee for other species

END

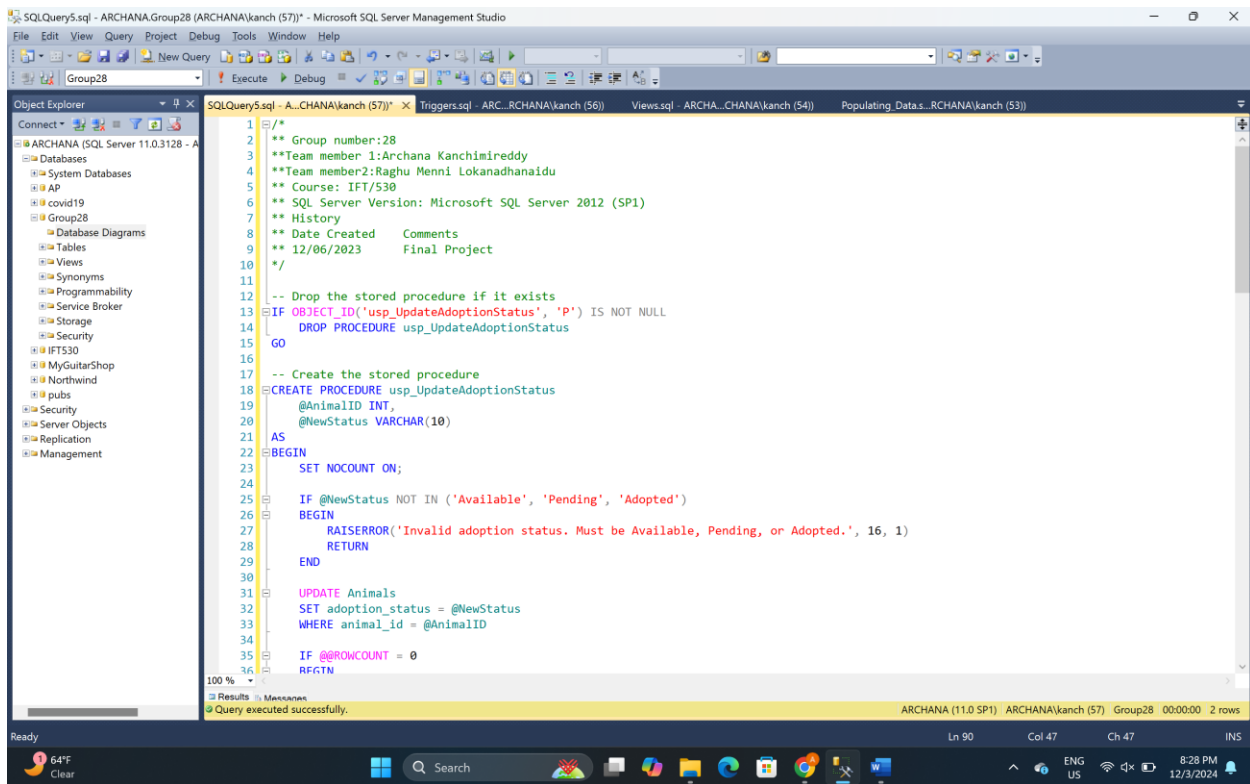

RETURN @Fee

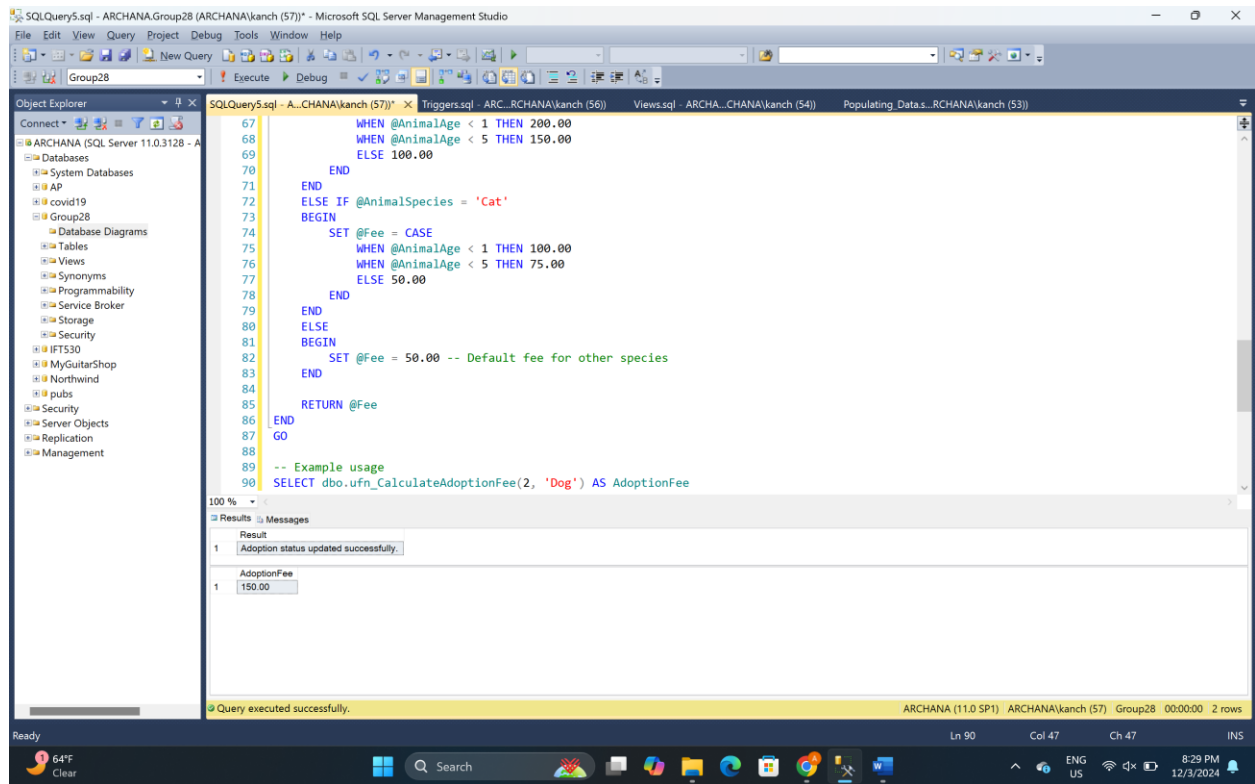

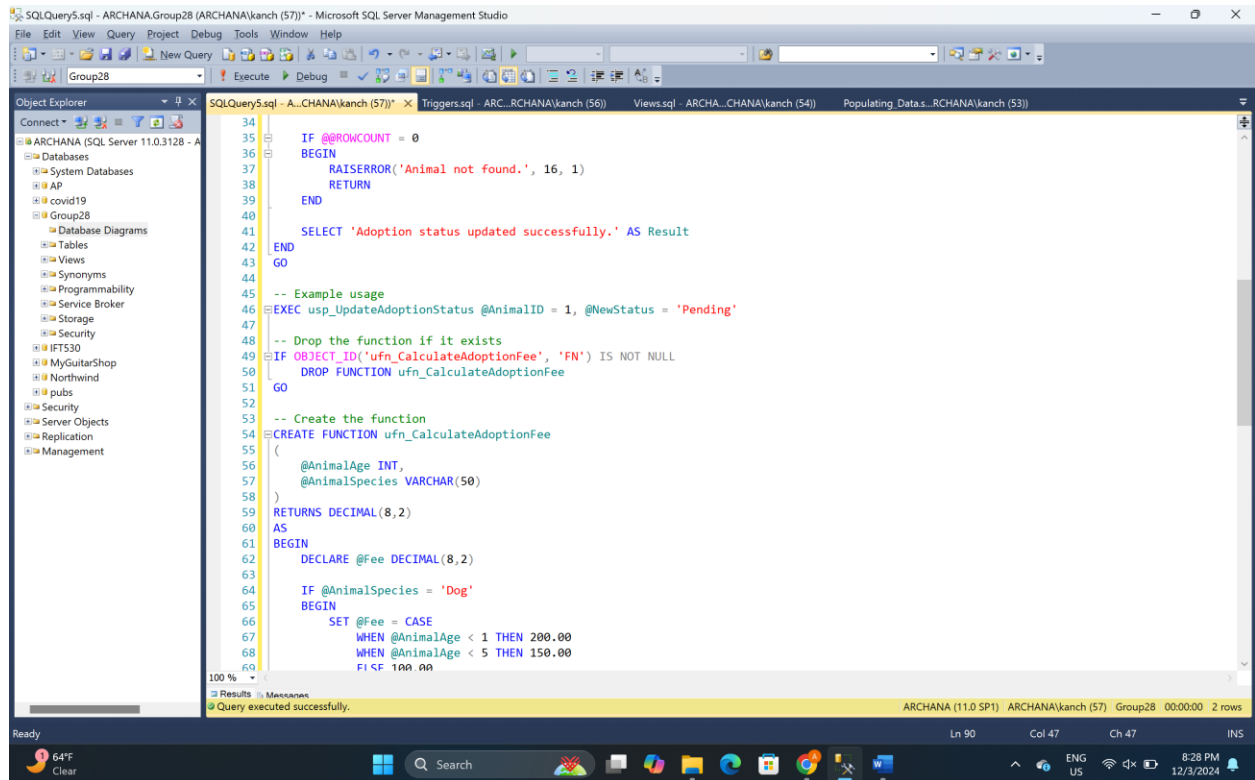

END

GO

-- Example usage

SELECT dbo.ufn_CalculateAdoptionFee(2, 'Dog') AS AdoptionFee

These examples demonstrate a stored procedure for updating an animal's adoption status and a user-defined function for calculating adoption fees. The stored procedure includes error handling and validation, while the UDF provides a reusable calculation based on animal attributes. Both include create and drop scripts for easy management in the database.

7.Demonstrate the use of one cursor for your database. Create and drop script for cursor. – (10 marks)
